INTRODUCTION

1. GENERAL. - The Medical Department Supply Catalog lists the standard items that are procured, stored, and issued by the Medical Department. As indicated by the preceding Table of Contents, this edition is arranged in four parts as follows:

a. Active Items. - Equipment and supplies are grouped by identifying item numbers under separate classifications according to use. Items appearing in this part of the catalog are those currently purchased and issued by the Medical Department.

b. Issue While In Stock Items. - These are items for which purchase for the Army has been discontinued, but for which stock remaining from previous purchases will be issued until supply is exhausted. These items are also procured or issued under Lend-Lease. They are classified according to use in the same manner as active items, but have been withdrawn from the numerical location they occupied as active items and constitute the second part of the catalog.

c. Appendix. - The appendix is composed of three sections as follows:
Section I lists organizational equipment of the Medical Department and indicates the proper reference source which will provide an itemized breakdown of this equipment.

Section II lists all kits, chests, cases, etc., procured by the Medical Department, together with the components comprising each assembly.

Section III lists Medical Department and certain War Department blank forms used for reporting field activities.

d. Index. - Equipment and supplies listed in the catalog are alphabetically indexed with reference to item number instead of page number. Issue While In Stock Items are placed in their proper alphabetical location and designated by "(IWIS)".

2. ITEM NUMBERS. - All items except those in Class 1K are designated by 5-digit numbers. However, for accounting purposes, two extra digits are often added and may appear on shipping tickets. The supplemental digits indicate that the items covered thereby vary in certain respects, such as size, current, voltage. These 7-digit numbers will be disregarded by all agencies which do not use machine methods of accounting. Each item in Class 1K is designated by a 7-digit number, and it is necessary that all digits be used.

3. NOTES. - The symbols appearing in the "NOTES" column of each Class are defined as follows:

- X - Item is expendable within the meaning of AR 35-6620.
- (1) - Considered deteriorating
- (2) - Refer to Section II of Appendix for list of components.
- (3) - Requisition must give sufficient data, such as size, type, manufacturer, or serial number of part, so that the depot can purchase or issue the proper item.
- (4) - Requisitions must state voltage, current (AC or DC - if AC, cycle and phase), or kind of gas, steam, etc.
- (6) - Alcohol or narcotic item.
- (7) - Item will be issued only to hospitals having one or more officers on full-time laboratory duty.
- (8) - Item will be issued only to dental laboratories.

4. ALLOWANCES. - Based on troop strength, allowances are shown for all expendable items in the catalog except a limited number which are issued only as components of an assembly. Expendable items in Class 8 are designated "As required", and expendable items in other classes used for veterinary purposes may also be requisitioned as required without limitation of the published allowance figures. Allowances for nonexpendable items are not shown in this catalog, since such allowances are governed by the type of installation at which equipment and supplies are to be used.

5. PRICES. - The prices shown in this catalog will govern in all cases of charges on payrolls, reports of survey, transfers, inventories, requisitions, and shipping tickets.

6. REQUISITIONING. - The following general instructions apply only in the continental United States. Requisitioning procedure for overseas bases and departments will be prescribed by proper authority. Reference is made to Section VII of "Stock Control Manual for Posts, Camps, and Stations" (TM 38-220), which gives certain information regarding submission of requisitions. Separate requisitions will be submitted for expendable and nonexpendable items.

Requisitions for routine replenishment of station stocks are to be submitted monthly to the proper distribution depot, except for (a) items 17000 to 17514, inclusive, for which requisitions will be forwarded to the Army Medical Center, Washington, D. C.; (b) items 18030 to 18280, inclusive, for which requisitions will be forwarded to the proper Service Command Laboratory; and (c) certain biologicals announced from time to time, which will be stored only in the Kansas City Medical Depot.

a. Requisitions for Expendable Items. - Use Requisitions M.D. Form 135, M.D. Form 135a, and M.D. Form 135b, or Q.M.C. Form 400 modified as indicated in Section IV of "Stock Control Manual for Posts, Camps, and Stations" (TM 38-220). Allowances for expendable items are based on troop strength. General hospitals will assume troop strength as the number of beds multiplied by 25. Requirements for expendable items for all organizations and installations at the station will be consolidated and one requisition submitted therefor. Commencing June 1, 1943, the "maximum level" (on hand and on order) of expendable items is established for 5 months. Requisitions for expendable items will show on the face thereof, or in the letter of transmittal, the troop strength for the current month and the estimated troop strength for the next 4 months - a total of 5 months.

In determining the "maximum level", the projected strength for 5 months will be totaled and this figure, in thousands, will be multiplied by the number appearing in the allowance column of the catalog. Example:

<u>Troop Strength</u>		<u>Calculation</u>
June	15,000	The allowance for Item 10100 Acid, Acetylsalicylic, USP, 5 Gr. Tab., is 5.750. Therefore, the "maximum level" for this item at this station is 80 times 5.750, or 560.
July	15,000	
August	15,000	
September	20,000	
October	<u>15,000</u>	
Total	80,000	

In applying troop strength; the following instructions will govern:

1 to 10,000 - Nearest 100 figure will be used. Examples:
501 to 549 will be considered 500, while 550 to 599 will be considered 600; 5,501 to 5,549 will be considered 5,500, while 5,550 to 5,599 will be considered 5,600.

10,000 and above - Nearest 1,000 figure will be used. Example: 13,001 to 13,499 will be considered 13,000, while 13,500 to 13,999 will be considered 14,000.

Normally the "maximum level" need be computed only once every three months, at the time of submission of the Station Stock Status Report (see paragraph 5, below). This "maximum level" is then entered in the proper space on the Stock Record Card and, unless an appreciable change in troop strength occurs, it will be unnecessary to recompute the "maximum level" in submitting interim requisitions.

b. Requisitions for Nonexpendable Items. - Use requisitions Form M.D. 136a and Form 136b, or Q.M.C. Form 400 modified as indicated by Section IV of "Stock Control Manual for Posts, Camps, and Stations" (TM 38-220). Allowances for nonexpendable items are based on the type of installation or tactical unit, such as hospitals, dispensaries, medical battalions, and not on troop strength. No allowance for nonexpendable items appears in this catalog. Requisitions for nonexpendable items must show either on the face of the requisition, or in a letter of transmittal, the types of installations and tactical units for which the items are being requested. Requirements for nonexpendable items for all fixed post installations and tactical units will be consolidated and one requisition will be submitted therefor.

The "maximum level" for nonexpendable items is computed as outlined in paragraph 4, "Stock Control Manual for Posts, Camps, and Stations" (TM 38-220), which is reprinted here in part for convenience.

"The maximum stock level for nonexpendable items is the sum of quantities authorized all post fixed installations (per equipment lists) plus 10% and plus 10% of quantities authorized all tactical organizations (per Tables of Basic Allowances and Tables of Equipment). This latter does not apply to controlled items, on which no stock level is authorized.

"Example: The fixed installations at the post have a total allowance per equipment lists of 2600 towels. The tactical units at the post have a total allowance of 1400 towels. The maximum level is 3000 as follows:

Fixed post installations	2600
10% of above	260
10% of allowance for tactical units	140
Total	3000

The total of 3000 is inserted in the maximum level space on Stock Record Card."

"There are certain installations, particularly the named general hospitals in existence prior to the present expansion, which cannot be fitted into the standard equipment list pattern. Special equipment lists for such installations will be developed without delay. There are certain other installations which, for reason of specialized function or physical construction of the hospital, require slight deviation from the standard equipment list pattern. In such instances, depots are authorized to develop, in conjunction with the station, supplemental individual equipment lists and to approve these lists."

In applying the 10% figure, fractions of less than 1/2 will be dropped. Fractions of 1/2 or more will be considered the next higher whole number. For example, a post having a 750-bed hospital may be entitled to 150 each of Item 70060 Bed, Adjustable, per equipment list. Ten percent (10%) of this is 15, making a total allowance of 165. The same post may be entitled to 1 each of Item 36260 Cardiograph, Portable, per equipment list. Ten percent (10%) of this is 1/10, which will be disregarded, giving a total allowance of 1. Applicable equipment lists may be obtained upon request to the St. Louis Medical Depot.

c. Requisitions for Issue While In Stock Items. - Stations may requisition these items in quantities desired. However, when depot stocks are

exhausted, requisitions will be cancelled by the depot. No maximum levels are established for Issue While In Stock Items.

d. Re-order Point. -

(1) Nonexpendable items, until such time as model stock lists are published, reach a re-order point whenever the balance on memorandum receipt, plus that on hand, plus quantity on order, drops below "maximum level". Requirements will be included on monthly requisitions unless justification exists for special or emergency requisition.

(2) Expendable items reach a re-order point when the balance on hand, plus that on order, falls below 2/3 (66%) of the "maximum level"; monthly requisition is then submitted to bring stock up to the "maximum level". The re-order point will be entered in proper space on Stock Record Cards.

e. Requisitioning Maximum Stock Level. - Stations are not required to requisition up to their maximum stock levels; in fact, it is not desired that stocks be requested unless a need is contemplated. If items are requisitioned in amounts less than allowed, the Surgeon of the post should be consulted.

7. STATION STOCK STATUS REPORTS. - Reference is made to "Stock Control Manual for Posts, Camps, and Stations" (TM 38-220). This report will be sent by distribution depots to review maximum stock levels and to determine excess property in posts, camps, and stations.

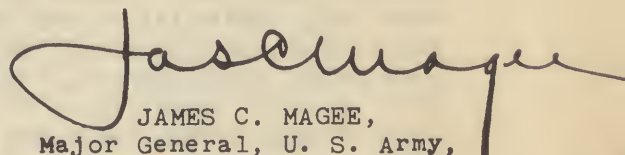

8. NONSTANDARD ITEMS. - The addition of many new standard items to this edition of the catalog has decreased the necessity for nonstandard items. Standard or nonstandard supplies required in emergency, to save life or prevent suffering, may be procured and vouchered to distribution depots under the provisions of AR 40-1705. Requisition editing offices have been instructed to disapprove all requests for nonstandard items unless an exceptional need has been shown. Questionable cases will be referred to The Surgeon General, Attention: Distribution Division, Supply Service, for action. The above remarks do not apply to nonstandard requisitions for repair parts, which will ordinarily be approved without question.

9. REPAIRS. - Many repairs of Medical Department equipment can be accomplished more efficiently and expeditiously by local action than by reference to a depot. Minor repairs will be handled locally. Major repairs, costing more than 50% of the value of the item, require prior authority from distribution depots. Replacement of x-ray tube inserts in shock-proof equipment will be handled locally as a repair whenever possible (see TM 38-1).

10. LOCAL STATION PURCHASES. - The authority to approve local purchases by stations has been decentralized to distribution depots. This subject is covered from time to time by instructions from the Office of The Surgeon General.

11. FIELD EQUIPMENT. - Field equipment and supplies in the hands of tactical organizations will be kept ready for field use, and will not be expended in the routine care of sick in garrison.

12. ERRORS. - Any errors in this catalog should be promptly reported to The Surgeon General, Attention: Catalog Branch, Materiel Office, Supply Service.

JAMES C. MAGEE,
Major General, U. S. Army,

10.1. INTRODUCTION

The purpose of this chapter is to study the higher dimensional case of the

SECTION I -- ORGANIZATIONAL EQUIPMENT

Current Tables of Equipment or Tables of Basic Allowances must be consulted to determine basis of issue authorized for organizational equipment furnished by the Medical Department.

Where indicated under "Reference" column below, the components constituting various units are shown on individual equipment lists for each assembly. These lists show Medical Department items only, and do not include equipment or supplies furnished by other branches. For such information appropriate Tables of Equipment or Tables of Basic Allowances should be consulted.

Copies of all equipment lists are furnished each Service Command for reference purposes only; distribution will not be made from this source. Posts, camps and stations may request equipment lists in duplicate for such installations and organizations as are activated at that particular post, camp or station, and each organization is entitled to two copies of the equipment list applicable to that particular organization. Copies of lists to which the requesting source is entitled may be obtained upon application to the St. Louis Medical Depot, St. Louis, Missouri. Complete sets of all lists will not be issued to installations or organizations; only such individual lists to which they are entitled as authorized above will be furnished.

WASHINGTON, D. C.

WAR DEPARTMENT
Army Service Forces
Office of The Surgeon General
Washington

1 August 1943.

SUBJECT: Catalog Change Notice No. 1-1943.

1. The attached Catalog Change Notice No. 1-1943 institutes a new method of announcing changes in the Medical Department Supply Catalog. SGO Circular Letters will no longer be utilized for this purpose.

2. Manual corrections on Catalogs should not be made. Instead, the numeral "1", to indicate that a change was effected by Catalog Change Notice No. 1-1943, should be entered at the appropriate place on pages where changes have occurred. The complete Change Notice should then be inserted in the back of the Catalog binder for reference. As subsequent Change Notices are issued, the procedure outlined above should be followed, using the applicable Change Notice numbers serially, so that the numeral "2" will indicate a change effected by Change Notice No. 2-1943, and so on.

3. From time to time, Replacement Pages incorporating all changes to date of issue will be distributed. When they are received, Catalog Change Notices should be discarded.

For The Surgeon General:

Paul I. Robinson
PAUL I. ROBINSON,
Colonel, Medical Corps,
Director, Supply Planning and
Specialties Division.

1 Attachment.

Note. On yellow sheets I placed "1" near number denoting individual number. (except for "New Issues".)

15 August 1943.

SUBJECT: Catalog Change Notice No. 2-1943.

1. Changes in the Medical Department Supply Catalog as shown on attached Catalog Change Notice No. 2-1943 are effective 15 August 1943.

2. New items marked * are published at this time for information only, as stocks are not available in depots. Requisitions for these items cannot be filled for a period of approximately two months, and should not be submitted, since such action will only result in the accumulation of back-orders.

3. Manual corrections on Catalogs should not be made. Instead, the numeral "2", to indicate that a change was effected by Catalog Change Notice No. 2-1943, should be entered at the appropriate place on pages where changes have occurred. The complete Change Notice should then be inserted in the back of the Catalog binder for reference.

For The Surgeon General:

Paul I. Robinson

PAUL I. ROBINSON,
Colonel, Medical Corps,
Director, Supply Planning and
Specialties Division.

1 Attachment.

*Note: On phone pages - have placed "2" beside
key unit number only.
Any item under the key number
should be looked up.*

SUBJECT: Catalog Change Notice No. 7-1943, for 1943 Medical Department Supply Catalog.

1. Changes in the Medical Department Supply Catalog as shown on attached Catalog Change Notice No. 7-1943 are effective 1 April 1944.

2. These changes are the result of the reclassification of items formerly listed in the "Issue While in Stock" section of the 1943 Medical Department Catalog in accordance with AR 850-25.

3. In the next edition of Medical Department Supply Catalog now being prepared, all items will be classified in accordance with the provisions of AR 850-25 as "Standard", "Limited Standard", or "Substitute Standard", and the designation "Issue While in Stock" will no longer be used. In a subsequent Catalog Change Notice soon to be published, a reclassification will be effected for certain items now listed in the catalog as "Standard".

4. Items which are being "Deleted" by the attached Change Notice will be disposed of as directed on Page 27 in accordance with the instructions for each item as indicated by the key letter in parenthesis opposite the item number.

5. Due to the nature of these changes, it is suggested that manual corrections be made in the appropriate places in the Catalog. The next edition of the Medical Department Supply Catalog will reflect these changes.

For The Surgeon General:

R. E. HEWITT,
Colonel, Medical Corps,
Executive Officer, Supply Service.
